

MATTHEW RICHARDS

matthewrichards234@gmail.com | New York, NY | [LinkedIn](#) | [Github](#)

Full Stack Engineer

Full Stack Engineer with a strong academic foundation in Computer Information Systems (Data Analytics concentration) and a minor in Computer Science. Versatile and detail-oriented developer with proven ability to design scalable front-end applications and robust back-end systems. Adept at combining software engineering and data analytics to streamline workflows, optimize performance, and enhance user experiences. Passionate about delivering innovative, clean-code solutions that empower teams, drive collaboration, and generate measurable business impact.

Technical Skills

Languages & Frameworks: HTML/CSS, TypeScript, JavaScript, Python, C++, React, NextJS, Express.js, SQL, MongoDB, Java

Tools & Platforms: Vite, Webpack, npm, Git, Docker, Babel, Jupyter Notebook, Microsoft Excel

Relevant Coursework

Programming and Computational Thinking, Object Oriented Programming I, Programming for Analytics I, Database Management Systems, Data Warehousing, Excel Module, Introduction to Semantic Technologies, Data Mining for Business Analytics, Discrete Mathematics, Data Structures & Algorithms, Software Design.

Technical Projects

WTWR: Weather-Based Outfit Recommender | [Github](#)

Dynamic weather web application for anyone who needs an outfit based on their own city's weather.

- Developed WTWR, a dynamic weather-based outfit recommendation web app using React, Redux, and React Router to deliver real-time weather data and personalized outfit suggestions.
- Integrated Node.js and Express.js backend services to handle user authentication and securely manage user data.
- Implemented reusable React components and hooks with global state management, improving maintainability and performance.

Spots: Social Media App | [Github](#)

Responsive social media app for students and young professionals to share posts, like content, and engage in real-time | HTML/CSS, JavaScript, Webpack, npm, git.

- Built REST APIs with fetch requests (GET, POST, PUT, DELETE) to manage and update data seamlessly.
- Integrated form validation and DOM manipulation to improve UX and ensure user input accuracy.
- Opens modals on click events for a dynamic user experience and provides loading indicators to show when input is being processed.

Mortgage Amortization Table | [Github](#)

Sept 2023 - Dec 2023

For college students interested in learning how mortgages work by visualizing payments, interest, and balance | C++

- Implemented a program to calculate principal, interest, and remaining balance for a mortgage amortization table.
- Generated and formatted output files into clean, column-aligned tables for easy readability and local download.
- Utilized loops, file handling, and precise calculations to dynamically build and export complete amortization schedule

Professional Experience

Sysoft, New York, NY

May 2024 - December 2024

Software Engineer Intern

- Successfully developed and implemented two softwares for the company, improving client data collection and organization for future operations.
- Designed a functional search table via JavaScript for quick lookups and sorting of a customer database.
- Manipulated client data in Jupyter Notebook to allow users to efficiently parse data and create organized CSV with desired information.

TripleTen Externships, Remote

October 2025 - December 2025

Software Engineer Intern

- Implemented secure login, signup, and logout flows using credential-based auth and Google Sign-In via Firebase.
- Built a full password-reset workflow, including email reset links, password update validation, and automatic database updates.
- Created database seed scripts to generate test data and verify initial server/database integration during early development.

Education

Baruch College, CUNY, New York, NY

Dec 2025

Bachelor of Business Administration in Computer Information System, Concentration in Data Analytics

Minor in Computer Science

Triple Ten Software Engineer Certificate

Dec 2025
